

CHELSEA ANESTAL

Altamonte Springs, FL | chelsea.anestal@gmail.com | github.com/chelseaa1808 | linkedin.com/in/chelsea-anestal

PROFESSIONAL SUMMARY

Principal Consultant/Solution Architect with 5+ years of healthcare and AI solutions. Experienced in managing project risks and escalations, preparing leadership updates, facilitating governance-style meetings, tracking action items, and improving operational processes across complex stakeholder groups. Currently pursuing a dual MS in AI & Business Analytics and MBA in Finance, with experience applying analytics, AI strategy, and process improvement frameworks to support scalable transformation and leadership decision-making.

CORE SKILLS

Risk & Governance: Risk reporting, issue tracking, escalation management, governance support, action-item tracking, process documentation, operational risk awareness, regulatory readiness, sensitive information handling

Program Coordination: Cross-functional stakeholder management, executive updates, meeting facilitation, change support, leadership materials, deadline management, process improvement

Analytics & Tools: Power BI, Tableau, Excel, SQL, Python, SharePoint, Microsoft Office, data analysis, trend identification, reporting

Domain: Healthcare technology, client delivery, clinical workflows, financial services coursework, AI-enabled transformation, regulated environments

PROFESSIONAL EXPERIENCE

Oracle | Solution Consultant

Dec 2022 - Present

- Lead health solution consulting/architecture work across a portfolio of 7 active projects and recently assumed backfill support for 2 additional projects following team attrition, prioritizing risks, deadlines, and stakeholder communication across competing workstreams.
- Capitalize on database management applications, mastery of desktop applications, including MS Office (Word, PowerPoint, Excel, and Access), and ability to work in a matrix-management environment to achieve organizational goals such as 41% reduction in clinical documentation for the Clinical AI Agent hospital users. Strategically use knowledge of current issues in the healthcare environment, particularly regarding quality measurement, outcomes studies, healthcare finance, and patient safety. Tactically use knowledge and application of statistical analyses, including financial variance analysis and statistical significance.
- Received recognition for applying graduate coursework in Risk Management, Information Security, and AI for Business to develop a transformation roadmap using metacognitive frameworks and AI Moat principles.
- Creatively use existing resources for problem resolution and thorough knowledge of information systems and their application to healthcare. Spearhead process improvements through initiative and ability to work independently (self-direction), while fostering collaboration and teamwork for maximal efficiency and effectiveness. Leverage strong interpersonal skills for interfacing with all levels of staff and leadership as well as external stakeholders of the organization. Maximize project health metrics (95+%) through ability to effectively respond to time-sensitive issues and meet deadlines. Reduced internal audit review time from approximately 6-10 hours to 2-4 hours per audit across 20-30 audit cycles by applying AI-enabled parsing and comparison workflows to streamline documentation review.

AdventHealth Orlando | Clinical Technician

Mar 2021 - Dec 2022

- Supported front-line clinical operations in a high-volume hospital environment, strengthening practical understanding of regulated workflows, patient safety expectations, and operational risk in care delivery.
- Collaborated with clinical and operational teams during digital health workflow changes, including the transition from Cerner to Epic, while identifying documentation and process bottlenecks affecting end users.

RESEARCH & SPECIAL PROJECTS

University of South Florida | Researcher

2024 - Present

Support AI research initiatives focused on human-AI interaction, behavioral decision-making, ethical system design, and AI-assisted workflows.

Contribute to platform development, experiment design, and data logic for AI-enabled research systems, including chatbot workflows, structured data capture, user interaction analysis, and study coordination. Apply graduate training in AI, analytics, finance, and information systems to evaluate how AI tools can be designed, tested, and deployed responsibly without increasing operational friction.
